

Where Guideless Fits

A short positioning & pricing-tier suggestion — how a single **Solo / Creator** tier could open a much larger segment without touching the team plan.

A Polymash perspective

For the Guideless team

June 2026

THE QUESTION BEHIND THIS NOTE

"What Price Point Would You Be Comfortable With?"

Rokas asked the natural question. Rather than just hand over **my number**, it's more useful to look at where Guideless actually sits in the category — and answer from **product positioning**, not personal discount.

What I love

The zero-editing, AI-narrated workflow. Click through a process, get a clean guide — without thinking like a video editor.

Where it snags

One paid step — **\$29/mo** — sitting beside tools that offer far more editing. For a quick-hit add-on, that's a hard jump from free.

WHERE GUIDELESS SITS

Same Category, Different Job

TOOL	MAIN JOB-TO-BE-DONE	EDITING / FLEXIBILITY
Guideless	Turn browser workflows into clear, AI-narrated guides — zero editing	Low — auto narration & zooms; built for speed
Guidde	Deep, customizable AI documentation (video + rich guides)	High — full editor, formats, enterprise control
Loom	General async video messaging & screen recording	Medium — record, trim, manual VO; broad use
Tella	Creator-grade screen / camera recording & branding	High — own VO, takes, layouts, timeline
Screen Studio	Polished, animated macOS product demos	Med-High — auto zooms with tuneable pacing

Guideless intentionally **trades editability for speed**. That's a real strength — but it places it in a **complementary** slot, not as a replacement for a primary editor.

PRICING LANDSCAPE TODAY

Priced With The Heavy Tools — Built To Be Light

TOOL	ENTRY PAID PRICE (APPROX.)	ROLE IN THE STACK
Guideless	\$29 / user / mo annual (\$39 mo)	Quick, AI-narrated guides at scale
Guidde	~\$50 / user / mo (AI tier)	Enterprise-oriented documentation
Loom	Mid-teens / user / mo + free starter	Broad, company-wide async video
Tella	~\$6.50–\$9.50 / mo (Pro / Premium, annual)	Solo creators & small teams
Screen Studio	One-time ~\$89 license	Founders & product marketers

The tension in one line: **Guideless is priced at or above tools that give more creative control**, even though it deliberately offers less. For a solo user, that makes the only paid tier hard to justify as a second tool.

THE UNDERLYING PRINCIPLE

People Pay For Control — Or For Speed

Pay a premium for control

Tella & Screen Studio: own voiceover, multiple takes, rearrange, overlays, fine-tuned motion. I'll pay more because I can **craft** the result.

Pay a utility price for speed

Guideless: instant, consistent, "good-enough" guides with no fiddling. Worth real money — at an **add-on, utility-level** price, not an editor's price.

Paying for simplicity works *up to the point* where lost flexibility starts to matter. Past that, the price has to be commensurate with the role.

THE GAP IN THE LADDER

Today There's Nothing Between \$0 And \$29

The solo creator, consultant, or founder who already pays for Loom, Tella, or Screen Studio has **no tier that fits**. They love the workflow at free — then hit a wall priced for a whole team.

THE SUGGESTION

Three Tiers, Not Two — Add A Solo Lane

KEEP AS-IS

Free

Onboarding

Up to 3 guides, AI narration, sharing, watermark. The "it just works" moment.

NEW

Solo / Creator

~\$9 / user / mo · annual

Core magic, no watermark, MP4 export, basic analytics. A monthly guide cap, single workspace.
Limited by volume, not by features.

REFRAME

Team / Pro

~\$29 / user / mo · annual

Today's plan — now clearly the *team* tier: unlimited guides, workspaces, roles, advanced analytics, brand kits, priority support.

No discount to the existing plan. One lane added *beneath* it — Solo is priced like a nice utility; Team stays priced like a department solution.

WHY THIS OPENS A SEGMENT

The Solo Tier Captures Buyers You Can't Reach Today

Adoption, not ARPU

Solo creators and consultants who already pay for Loom / Tella / Screen Studio add Guideless as an **always-on quick-hit utility** — if the price matches that role.

A pipeline into Team

These are the people who later bring Guideless to their teams and clients. The Solo tier is a **top of funnel**, not a leak — it feeds the \$29 plan.

A **\$9 Solo tier** sits just above Tella's rock-bottom annual and well below Loom Business and the current \$29 plan — the natural home for "I love it, but it's my second tool."

Short Version

Guideless is brilliant as a fast, low-friction documentation tool — but its one paid tier is priced beside far more flexible tools. A dedicated **Solo / Creator tier around \$9/mo**, between today's Free and Team plans, could open a much larger solo segment **without diluting the team value at \$29**.

Happy to talk it through with your product team. — Juergen Berkessel, Polymash
