

A PODCAST FOR LYND A

The Best is Yet to Come

The simplest way, in 2026, to record real conversations with people you admire — and have them appear as a published podcast. A plain-language overview, so we can talk it through together.

Prepared for Dr. Lynda Klau

A conversation starter

July 2026

WHAT THIS IS

A friendly overview — read before we talk

You've imagined a show — *The Best is Yet to Come* — where you sit down with remarkable people and explore what's possible. This isn't a technical manual. It's a short walk through **how simple starting a podcast has actually become**, so nothing about the "how" stands between you and the conversations.

What you want

To interview people you admire — remotely — and have each episode appear on Spotify and Apple Podcasts.

What you don't want

To juggle software, wrestle audio files, or learn a stack of technical tools just to press record.

The promise

One tool, a few clicks per episode, and the fiddly parts set up just once — by someone else.

THE WAY IT USUALLY WORKS

Normally, a podcast means assembling a small stack of tools

This is what has scared people off for years — not the talking, but everything around it. A typical setup asks a beginner to learn and connect **six to eight separate tools**:

Scheduling

A separate booking tool for guests

Recording

A remote studio like Zoom or Zencastr

Editing

Audio software (Audacity, Descript)

Hosting

A podcast host (Buzzsprout, Captivate)

Uploads

Export the file, re-upload each episode

Submission

List the show on Apple & Spotify

Show notes

Write a summary for every episode

Website + clips

A site, plus social snippets

None of it is about the conversation. All of it is why most people never start.

THE SIMPLE WAY

In 2026, it collapses to two things

1 • Riverside

One website where you **record** with remote guests, let it **clean up** the audio, and **publish** — all in the same place. It even **hosts** the show for you, so there's no separate host and no files to move.

RECORD → EDIT → HOST → PUBLISH

2 • Spotify for Creators

A **free** service from Spotify that carries your show out to the listening apps. Set up *once*, then it just works in the background.

DISTRIBUTES EVERYWHERE • FREE

Everything on the previous slide folds into these two. You live in **one** tool. The rest is handled — most of it just once, at the start.

RECORDING AN EPISODE, START TO FINISH

Five steps — and none of them touch a file

- 1** **Open your studio.** Log in to Riverside in your browser — nothing to install.
- 2** **Send your guest a link.** They click it and join — no account, no download.
- 3** **Press record.** Have your conversation. When you're done, stop.
- 4** **Accept the tidy-up.** The tool cleans the audio and drafts your notes — you review.
- 5** **Publish.** One button. The episode goes live on Spotify, Apple, and YouTube.

No downloading. No uploading. No "where did that file go." Record here, publish here.

YOUR GUESTS JUST CLICK A LINK

The remote-guest part is genuinely easy

Nothing to install

Your guest opens the link in their normal web browser and they're in. No app, no account, no setup call beforehand.

Everyone sounds good

Each person is recorded in high quality on their own device — so even a shaky internet connection doesn't ruin the audio.

Room for a group

You and up to nine guests at once — plenty for a one-on-one interview or a small panel.

This is the part people worry about most — "will my guest be able to figure it out?" With a single link, they will.

WHAT THE ASSISTANT DOES FOR YOU

The tedious production work is drafted automatically

After you finish recording, Riverside's built-in assistant prepares the "produced" version of your episode. You don't operate it — you **review what it drafts**.

Cleaner audio

Background noise reduced, levels smoothed.

Show notes & title

A written summary and a title suggestion.

Chapters

Timestamps for the topics you covered.

Transcript

A full written version of the conversation.

Short clips

Highlight moments cut for social media.

Text-based trims

Delete a stumble by deleting the words.

Everything here is a draft you can accept as-is or lightly adjust — never a technical chore.

WHERE YOUR EPISODES APPEAR

On the listening apps — and on your own website

The podcast apps

Once set up, each new episode flows automatically to [Spotify](#), [Apple Podcasts](#), and [YouTube](#). The technical "feed" that carries them there is handled for you — you never see it.

Your own website

Want episodes on [drlyndaklau.com](#) too? [Your web person can add a small Spotify player](#) to your site — visitors press play right there, no extra work from you.

The show lives everywhere your listeners already are — and on your own site as a natural extension of *Life Unlimited*.

THE ONE-TIME SETUP

The technical part happens once — and not by you

There's exactly one moment of "wiring things together" in this whole story: connecting your show to Spotify, and listing it on Apple Podcasts. It's done **a single time, at the very beginning** — and it's a natural job for **your web person**.

Done once

Connect to Spotify for Creators; submit the show to Apple Podcasts. After that, it's automatic forever.

Not your job

Your web person can handle it — Juergen can hand them a simple step-by-step so it takes them minutes.

Then invisible

From your first episode onward, you only ever record and press publish.

USUALLY MANY TOOLS → NOW BUILT IN

The same jobs, quietly handled

THE JOB	THE OLD WAY	NOW
Book & meet the guest	Separate scheduling + video tool	One link, in Riverside
Record everyone in HD	A remote recording studio	Built in
Clean up the audio	Editing software to learn	Automatic draft
Store & serve the show	A separate podcast host	Built in (hosting)
Get each episode online	Export a file, re-upload it	One publish button
Write show notes & title	Write by hand every time	Drafted for you
List on Apple & Spotify	Manual submission	One-time setup (web person)
Episodes on your website	Build a player yourself	Paste-in Spotify player

WHAT IT COSTS

One modest subscription, plus a free service

Riverside

~\$29 / month

The paid plan that includes hosting, the AI assistant, and longer recordings. A bit less if paid yearly.

Spotify for Creators

Free

Hosting and distribution to the apps, at no cost.

The old stack, for contrast

A separate host (\$19–99/mo), editing software (\$16–24/mo), a recording tool, and a website — several bills, several logins.

Prices as listed July 2026 and can change — the point is the shape: one small subscription instead of many.

WHAT YOU NEVER HAVE TO TOUCH

The list of things that are simply not your problem

✓ Downloading or uploading audio files

✓ Anything called "RSS" or a "feed"

✓ Audio editing software

✓ A separate hosting platform

✓ Manual submissions after episode one

✓ Asking guests to install anything

A FEW HONEST, PRACTICAL NOTES

So there are no surprises

Hosting comes with the paid plan. The all-in-one convenience is why the ~\$29/month plan is the one to use — the free tier can't host your show.

The Apple listing is one small technical step. It happens once, at the start, and your web person (or Juergen) can take care of it — you don't need to learn it.

Nothing here traps you. If the show grows and you ever want more, everything can be moved to another service later. You're not locked in.

LEARN IT IN AN AFTERNOON

A few plain-English walkthroughs (not sales pitches)

These are independent teachers on YouTube — the kind that walk you through it gently, screen by screen. Watching one or two is genuinely enough to feel ready.

BEFORE WE TALK

Questions to bring to our conversation

Nothing to decide yet. Just notice what you're curious or unsure about — that's exactly what we'll walk through together.

Who are the first few people you'd love to interview?

How often feels joyful, not like a chore?

What would make this feel like a success to you?

The best is yet to come.
